1 Change History

The following table shows the history of document changes.

Document version	Description	Page(s) with change	Issue Date	Author
1.0	Initial Version	7	5 December 2013	New Channels team
2.0	Added part with “Additional manual”	8	10th July 2018	eCommerce team
3.0	Changed from Mastercard, Visa to all card brands which acceptance is 3D Secure certified	Footnote	10th December 2020	Kristijan Pleše
3.1	Changed <i>bank</i> to <i>bib</i> in URLs		22nd January 2026	Kristijan Pleše

2 Audience

For the merchants that are using hosted payment page (HPP) on NestPay and do not host have their own.

3 Transaction Part

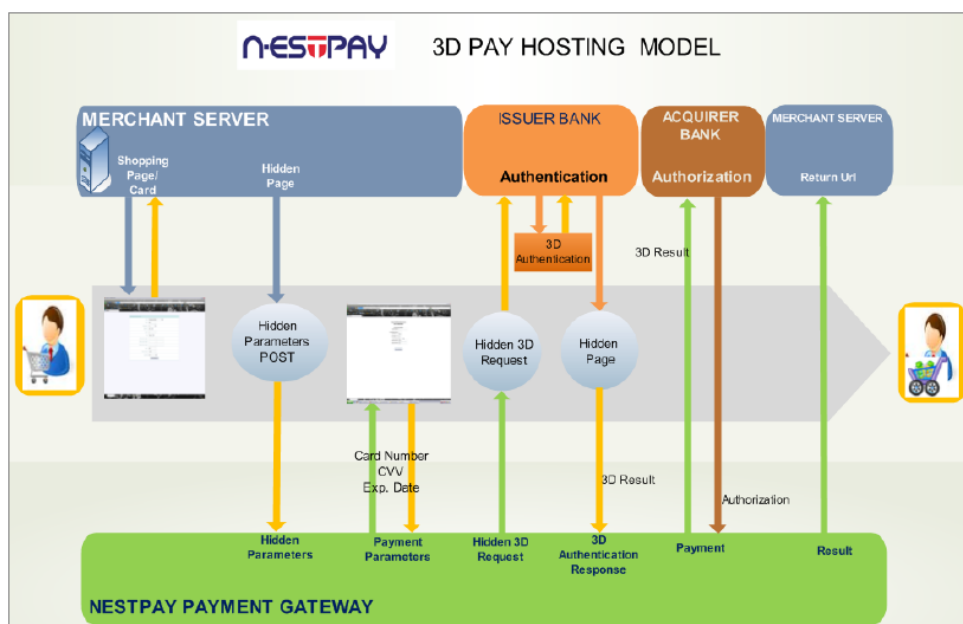

This is for banks' merchants with web payment page hosted on NestPay. To make payment they are redirecting cardholders to NestPay hosted payment page (HPP) by sending "3D Pay Hosting" http post request where cardholders are entering card details. This kind of merchants are not keeping card details and PCI DSS requirements are on Nexi Croatia side.

The main characteristics of this way of integration are:

- payment page is on Nexi Croatia/*The Bank* side
- card holder data are collected on Nexi Croatia/*The Bank* side
- Merchant back-office system could be integrated with NestPay as back-office system
- Merchant Center

3.1 "3D Pay Hosting" Model Scheme

Ecommerce buying steps for "3D Pay Hosting" model are described on below scheme:

**3DPayHosting
Model Diagram**

Note: payment page is on Nexi Croatia/*The Bank* side

"3DPayHosting Model Diagram" represents buying steps, starting from the most left yellow arrow, in one part. The timeline starts on the left and ends on the right. On acquiring side of ecommerce buying process there are three business entities:

- Merchant's system presented on upper part of above diagram (blue boxes)
- Customer in the vertical middle (gray box)

- Nexi Croatia/*The Bank* eCommerce acceptance system NestPay on lower part of above diagram (green box).

3.2 Buying Process/Steps

“3D Pay Hosting” model on above Diagram described in detail:

1. Customer fills the shopping cart with products and when clicks on buy Merchant system redirects customer to NestPay/*The Bank* hosted payment page (HPP) with “Hidden Parameters POST”,
2. Customer enters Payment Parameters (card number, CVC2, expiry date) on secure NestPay hosted payment page (HPP) of *The Bank*
3. NestPay sends “Hidden 3D Request” to Issuer bank¹
4. Issuer bank sends “Hidden Page” to NestPay with 3D Secure² authentication result
5. NestPay sends “3D Result” parameters together with authorization message to *The Bank*²
6. *The Bank* sends “Authorization” response to NestPay
7. NestPay sends “Result” to Merchant “Return URL”

3.3 Integration Model in Short

In “3D Pay Hosting” model, HTTP request should be sent where 3D Secure² authentication will be checked, and authorization message will be made. NestPay “3D Pay Hosting” links for post request are:

- **TEST** link <https://testsecurepay.eway2pay.com/fim/est3Dgate>.
- **PRODUCTION** link <https://bib.eway2pay.com/fim/est3Dgate>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

HTTP requests are described in “*Nestpay_Merchant_Integration_3D_PayHosting.pdf*” manual:

1. “3D Pay Hosting” model enables processing of 3D Secure² card transactions and authorization:
 - a. easy to use HTTP Post method is supported for Merchant integration

¹ Only for 3D Secure certificated card brands defined by acquiring bank. For other card brands those steps are skipped.

² Only for 3D Secure certificated card brands defined by acquiring bank.

- b. settlement is done automatically by NestPay
2. The Merchant does not save customer personal information, because credit card information are collected on NestPay hosted payment page (HPP) of Nexi Croatia/*The Bank*.
3. Nexi Croatia/*The Bank* SSL certificate is used so the customer can trust to NestPay hosted payment page
4. Beside mandatory fields the Merchant can POST to NestPay optional data, such as username, user email or user id

The Result of 3D Secure³ authentication check and authorization will be in NestPay response to Merchant URL.

In addition, for the merchants it is possible to void, refund, and make post-authorization or check order status by sending **API requests** toward NestPay or by using Merchant Center, which will be described in next paragraph.

The above-mentioned **API requests** must be sent to NestPay:

- **TEST** link <https://testsecurepay.eway2pay.com/fim/api>.
- **PRODUCTION** link <https://bank.eway2pay.com/fim/api>.

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

How to generate API requests for some order is described in “*Nestpay_Merchant Integration API Manual.pdf*” manual:

- a. Secondary transactions (post-authorization, void, refund)
- b. Order status query
- c. Order history query

Note: “Order Detail Service” is replacement for “Order Query Service” from “*Nestpay_Merchant Integration API Manual.pdf*”. It is explained in “*Nestpay_OrderDetailService.pdf*”. In the future “Order Query Service” development won’t be supported.

³ Only for 3D Secure certificated card brands defined by acquiring bank.

4 Merchant Administration

Merchant administration back-office system is NestPay **Merchant Center**.

Merchant Center link depends on is it for test or production:

- **TEST** <https://testsecurepay.eway2pay.com/bib/report/user.login>
 - **PRODUCTION** <https://bib.eway2pay.com/bib/report/user.login>
- Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.*

It is used for:

- administration:
 - o orders
 - o transactions
 - o users
 - o merchant parameters for connection to NestPay transaction system
- searching:
 - o downloading needed documents for integration with NestPay transaction system
 - o bank information
 - o help

and many other things related to NestPay transaction system. The details could be found in “*Inhouse_NestPay_MerchantCenterUserManual.pdf*” manual.

5 Merchant Integration with NestPay Transaction and Back-Office System

In following paragraphs it will be described the main steps of merchant integration, with links and documents for integration.

5.1 Downloading the manuals from Merchant Center (test)

To download the manuals login to test Merchant Center with *Merchant Id*, *Username* and *Password* for Merchant Administrator role provided by *The Bank*.

The **Merchant Center** links are:

- **TEST** link <https://testsecurepay.eway2pay.com/bib/report/user.login>
- **PRODUCTION** link <https://bib.eway2pay.com/bib/report/user.login>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

There are three main manuals:

- *"Nestpay_Merchant_Integration_3D_PayHosting.pdf"* - transaction manual for 3D Secure⁴ HTTP POS requests and responses with explanations of mandatory/optional parameters and examples
- *"Nestpay_Merchant Integration API Manual.pdf"* - transaction manual for authorization API requests and responses with explanations of mandatory/optional parameters and examples
- *"Inhouse_NestPay_MerchantCenterUserManual.pdf"* - merchant administration manual for Merchant Center back-office system

Additional manual:

- *"Nestpay_OrderDetailService.pdf"* - explanation for "Order Detail Service" which is replacement for "Order Query Service" described in *"NestPay_Merchant Integration API Manual.pdf"*, "Order Query Service" additional development won't be supported

5.2 Development of Merchant system (test)

Merchant needs to develop test system for integration with NestPay following rules and examples from downloaded manuals.

For "3D Pay Hosting" model of integration merchant should send all mandatory parameters values listed in *"Nestpay_Merchant_Integration_3D_PayHosting. pdf"*. Those values/data are collected on NestPay hosted payment page (HPP) of Nexi Croatia/*The Bank*. There are also optional data mentioned in those manuals which could be sent to NestPay.

While developing merchant site and payment page Merchant must follow rules provided by *The Bank*. Before production, *The Bank* will check Merchant site and payment page.

⁴ Only for 3D Secure certificated card brands defined by acquiring bank.

5.3 Checking/changing Store Key

For making transactions in “3D Pay Hosting” model *Merchant ID*, already provided in one of previous steps, and *Store Key* are needed. *Store Key* could be found in **Merchant Center**.

The links for **Merchant Center** are in “[4 Merchant Administration](#)” paragraph.

5.4 Test Merchant system

Merchant administrator must make mandatory test cases with test cards that are given by *The Bank*.

For that merchant is sending http post request on NestPay links where 3D Secure⁵ authentication and authorization will be made in a single step according to “*Nestpay_Merchant_Integration_3D_PayHosting.pdf*” manual.

The NestPay links is:

- **TEST** link <https://testsecurepay.eway2pay.com/fim/est3Dgate>

Note: *Test cases* and *Test cards* could be downloaded from Merchant Center **TEST** link <https://testsecurepay.eway2pay.com/bib/report/user.login> in *Documents* under *Help* panel. Which test cases are mandatory for the Merchant depends on functionalities and transaction types used by merchant. After all mandatory tests are done Merchant should contact *The Bank* to approve test process. If some test is failed, then must be repeated.

Note: *The Bank* part of link is known to bank administrator or contact Nexi Croatia administrator.

5.5 Switch to production

When all previous steps are successfully finished merchant will get production parameters (links, *Merchant Id*, *User Name* and *Password*) from *The Bank*.

However, merchant should repeat step with checking/changing *Store Key*. After that merchant could make production transactions.

If merchant is using API requests, then he must create API role in production environment.

6 General notes

- Do not use *Test cards* on production environment

⁵ Only for MasterCard, Maestro and VISA cards.

- For any question related to integration *The Bank* contact information on Merchant Center
 - o **TEST** <https://testsecurepay.eway2pay.com/bib/report/user.login>
 - o **PRODUCTION** <https://bib.eway2pay.com/bib/report/user.login>

login page could be found

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

- The Merchant security parameters (Merchant ID, User Name and Password) are different for test and production environment

7 Abbreviations

(I)PSP = (Internet) Payment Service Provider with more than one merchant connected to its system

IPG = Internet Payment Gateway

MPI = Merchant Plug-In, renamed in **3DS Server** for EMVCo 3DS 2.x

3D Secure⁶ authentication = secure way of card holder authentication (usually one time password) on the bank which issued the card used for payment in ecommerce transaction

Name for 3D Secure is different for different card brands:

- *Mastercard Identity Check*
- *Visa Secure*
- *American Express SafeKey*
- *Diners ProtectBuy*
- *DinaCard Secure*

NestPay = new ecommerce platform service for *The Bank* merchants provided by Mercury Processing Services International

Nexi Croatia = payment processor hosting NestPay payment gateway

HPP = Hosted Payment Page, hosted by NestPay

Types of transaction messages in comparison to previously used names (only for merchants that were using old ecommerce platform, before 2014):

- preauthorization = preauthorization/authorization with completion
- auto-post-authorization/sale = authorization/ authorization without completion
- post-authorization = completion
- void = reversal/cancellation transaction
- refund/credit = refund
- order status query = authorization check status/completion check status

⁶ Only for 3D Secure certificated card brands defined by acquiring bank.
