

Model-First Pricing

2026

Pillar 1: Architectural Visualization

Euro (EUR)

We build the model once.

You benefit every time.

Model-First Pricing is based on the marginal cost of production.
Once the 3D model is built, each additional output from that
model costs incrementally less — and we pass those savings
directly to you.

The more you order from the same model, the more you save.

1.1 — Exterior Rendering

Model-First Pricing reflects the true cost of 3D production. The initial render carries the full cost of building the 3D model. Every additional output from that same model costs progressively less, because the heavy work is already done. The more you order, the more you save.
